Activity Diagram

Below is the explanation for each action and decision node.

Start: The user is navigating the Employee Management System .

Admin selects "Manage Employee"

The admin navigates to the Employee Management section from the system's main menu to begin managing employee records.

System displays employee list

The system loads all existing employees and presents them in a table, including options such as View, Edit, Delete, and Add Employee.

Admin clicks "Add Employee"

The admin chooses to create a new employee record by selecting the Add Employee option.

System displays Add Employee form

The system opens a form where the admin can enter the new employee's details, such as name, department, job title, contract type, and start date.

Admin fills employee details

The admin enters all required information into the form fields.

Admin clicks Submit

The admin confirms the creation of the new employee by submitting the form

Decision Nodes:

Decision 1: Is employee data valid?

This decision checks whether the admin has filled all required fields correctly.

- **Yes:** The system proceeds to check if the employee already exists.
- **No:** The system displays an error message (e.g., missing fields or invalid format) and returns the admin to the form to correct the information.

Decision 2: Does employee already exist?

This decision checks whether an employee with the same identifying information (e.g., name, ID, email) already exists in the system.

- **Yes:** The system shows an error message indicating the employee already exists and returns the admin to the form.

- **No:** The system continues to save the new employee.

Final Actions:

System saves employee

The system stores the new employee record in the database.

Final Node

The use case ends, and the admin may continue managing employee
