Description of the Overall Results

The User Acceptance Testing was executed individually by all team members using the same 10 test cases. Overall, the majority of the test cases passed consistently across all evaluators, indicating that the core functionalities of the Employee Management System such as login, dashboard loading, employee CRUD operations, department creation, leave management, payroll processing, and language switching are functioning as expected.

A few inconsistencies were observed in areas such as form validation, responsiveness, and localization, where some evaluators experienced minor failures. These issues were not critical to system stability but highlight areas that require refinement before final deployment. In general, the system is stable and meets the acceptance criteria, with only minor usability and validation improvements recommended.
